SUMMARY

Passionate Software Developer with an emphasis on writing clean, reusable code focusing on user experience and functionality with knowledge of backend and database integration.

WORK EXPERIENCE

Software Developer, FabriQ - May 2019 - November 2020 - Farmington, UT. (tryfabriq.com)

- Lead developer for web application KNX, a React/Redux, Node.js backend based application for distributors (realtors, title companies, etc.) to send their customers to in order to direct them to services they need from trusted local providers.
- Lead startup company's transition on two projects -- Paydrt, a cloud-based business management application for bloggers and content marketers to FabriQ, an Electron.js framework-based desktop app for managing workflows and freelance remote work using JavaScript stack and PostgreSQL database.
- Utilized Agile Methodology to organize a product roadmap and weekly sprint cycles to meet necessary KPI's in a rapidly changing environment spurred by continuous customer feedback.

Freelance Software Developer - November 2018 - April 2019 - Salt Lake City, UT

- Developed mobile goal-tracking application for local Salt Lake City client for iOS and Android in React Native.
- Set up weekly progress meetings and set up data analysis tools for client to view customer demographics and organize company plan accordingly

IT/Project Implementation Manager - Caffey, Inc. - January 2014 - August 2018 - Biloxi, MS.

- Liaison between Design-Build Team at company office and field projects, assuring timely solutions for prep & delivery of \$10M+ worth of Medical Diagnostic Imaging equipment across the U.S. including Nuclear Medicine Systems and Radiology Applications. Tasked with maintaining project schedule, budget, & scope.
- Maintained Office HQ hardware and software implementations including Microsoft Active Directory, Server, Dell SonicWall VPN integration and bug fixes/issues.
